

Regional Decisions for Climate Change

GEOSS Workshop The User and the GEOSS Architecture XVI

UCAR/NCAR Center Green Boulder, CO September 21-22, 2007 Friday (8:00-5:00) Saturday (8:00-1:00) No Fee. All are welcome.

This workshop will address how the GEOSS Architecture supports citizens and policy makers in making decisions based upon regional predictions of climate change. Recognizing that the science to predict regional changes in climate is still advancing, the workshop will address interoperability arrangements for decision support tools and predictive models used around the globe to support policy and management decisions. This workshop is one in a series organized by IEEE, ISPRS and OGC

For more information and registration, refer to website: http://www.opengeospatial.org/event/070921workshop
