Title: ⓘ	* Fix Table 2 BBOX definition
Source: ⓘ	*CSIRO
Work item code: ⓘ	
Category: ⓘ	* D (Editorial modification)
Reason for change: ⓘ	* Bounding boxes are defined in a normative reference (06-121r3:2009, 10.2.3) to be of arbitrary dimensionality. The semantics of selection are defined in 7.8.3.2 to be that resources are not-disjoint with the bounding box. Table 2 refers to a non-existent document (presumably intending 06-121r3:2009), arbitrarily and inconsistently restricts a BBOX to a "rectangle", and uses inconsistent intersection language.
Summary of change: ⓘ	* In Table 2 replace:

	"A bounding rectangle, encoded as specified in OGC 06-131r3, indicating that all resources which intersect that BBOX shall be retrieved from some data store." with "A bounding box, encoded as specified in OGC 06-121r3:2009 10.2.3, indicating that all resources not disjoint with that BBOX shall be retrieved from some data store."
Consequences if not approved: 	Risk that some implementers might restrict BBOX to two dimensions or be confused about the selection semantics.
Clauses affected: 	* Table 2, selection clause section, row defining BBOX, third column.
Additional Documents affected:
