Title:	*Operation-level roles and security
Source:	*OWS-7 Kickoff
Work item code:	
Category:	* B (Addition of feature)
Reason for change:	* There is expressed need for operation-level security based on roles. For example, an SPS may wish to allow a particular user to perform one operation but not a different operation, while other users could request both.
Summary of change:	* While this could just be handled internally within the implementation, there is a question as to whether allowable roles should be disclosed in the Capabilities.
Consequences if not approved:	This could be perhaps provided by splitting the functionality into separate SPSes but that may not be ideal.
