Title:	*Query results default ordering inconsistency
Source:	*CAT 3.0 SWG
Work item code:	
Category:	* F (Critical correction)
Reason for change:	* The default ordering of query results is inconsistently defined in the document: - Table 10 (UML attributes and roles in "query" operation request): sortSpec default is sorted on ID in descending order - §10.8.4.12 SortBy parameter: no default defined - Table 65 (KVP encoding for GetRecords operation request): default action is to present the records in the order in which they are retrieved
Summary of change:	* The UML model should not define a default ordering. Individual Application Profiles may define a default, if considered useful. In general, requirements on ordering may negatively impact the implementation of distributed queries, so the issue should be carefully considered
Consequences if not approved:	Inconsistency in the specification

Clauses affected: ⓘ	* Table 10, 11, 65 and §10.8.4.12
Additional Documents affected: ⓘ	06-131r6_EO_EP_0.2.5 (note 10 should be deleted); possibly other Application Profiles
