Title:	*CITE test doesn't comply with section 14.3.3 of the spec
Source:	* http://sourceforge.net/mailarchive/forum.php?thread_name=4D10CA84.6050504%40lat-lon.de&forum_name=degree-t
Work item code:	
Category:	* D (Editorial modification)

Reason for change:	* Implement section 14.3.3 of the spec results in failing the CITE. Here is the assertion... <pre>\ "A KVP parameter value that denotes a bounding box shall conform to the general syntax specified in subclause 10.2.3. If no CRS reference is provided, a service-defined default value must be assumed.\ "</pre> However, section 14.3.3 of the spec gives an impression that EPSG:4326 (WGS84) must be used for BBOX 2-D coordinate system. Follows are the excerpt of section 14.3.3 <pre>\ "14.3.3 Bounding box The bounding box parameter, BBOX, is included in this specification for convenience as a shorthand representation of the very common a bounding box filter which would be expressed in much longer form using XML and the filter encoding described in [3]. A BBOX applies to all feature types listed in the request. The KVP encoding for a bounding box is defined in subclause 10.2.3 of normative reference [15]. The general form of the parameter is: BBOX=lcc1,lcc2,...,lccN,ucc1,ucc2,...uccN[,crsuri] where lcc means Lower Corner Coordinate, ucc means Upper Corner Coordinate and crsuri means the URI reference to the coordinate system being used. This encoding allows N coordinates for each corner listed in the order of the optional crsuri. If the crsuri is not specified then the 2-D coordinates shall be specified using decimal degrees and WGS84 as described in [15].\ "</pre>
Summary of change:	* Either the spec needs to change to match with CITE or CITE needs to change to conform to the s

	either the spec needs to change to match with CITE or CITE needs to change to conform to the s
