Title:	*Clarify semantics of Projection Clause in GetPropertyValue
Source:	*interactive instruments
Work item code:	
Category:	* A (corresponds to a correction in an earlier release) ⇕

Reason for change:	* The role of projection clauses in a Query in a GetPropertyValue request is unclear. In a way the GetPropertyValue is already a projection so supporting the standard projection clause, too, is of no use in practice (but may require additional effort in implementations): If the target property is optional and excluded by the projection, the result is empty. In all other cases the projection has no effect.
Summary of change:	* Clarify that projection clauses shall be ignored in GetPropertyValue operations.
Consequences if not approved:	Unnecessary burden on implementations.
