Title:	*[EO PMOS SWG] Improved way of expressing the timeliness of EO Product acqu
Source:	*ESA/GIM
Work item code:	
Category:	* B (Addition of feature)
Reason for change:	* Allow better expression of the timeliness of EO product acquisition and processing.
Summary of change:	* Addition within the EarthObservationResult/product/ProductInformation class of a new optional property <code>timeliness</code> that specifies the timeliness of the product acquisition, such as "near real time" or "rush". Possible values are mission specific and shall refer to mission/ground segment dedicated codeSpace. Example of values are "NRT" or "NOMINAL" The current ProcessingInformation/processingMode element is constrained to a fixed enumeration with values that are not generally applicable and through which the timeliness cannot be correctly expressed. It is proposed to change the type of this element to a mission/ground segment specific codelist . Examples of values are <code>NRT</code>, <code>NOMINAL</code>, <code>NOMINAL</code>, <code>REPROCESSED</code>, <code>BACKLOGGED</code>, <code>VALIDATE</code>
