Title: 🔵	* [WFS/FES SWG] 403 inappropriate HTTP status code for OperationProcessingFa
Source: 🔵	*rmartell@galdosinc.com (CITE)
Work item code: 🔵	
Category: 🔵	* C (Functional modification of feature) ⬍

Reason for change: 🔵	* The mapping in Table D.2 is odd here, since status code 403 (Forbidden) is usually reserved for security-related exceptions (i.e. insufficient privileges). "The server understood the request, but is refusing to fulfill it. Authorization will not help and the request SHOULD NOT be repeated." <http://tools.ietf.org/html/rfc2616#section-10.4.4> But here, with an invalid operand the server did _not_ understand the request and cannot fulfill it. A generic 400 would seem to fit best. I'll update the test to allow either 400 or 403.

Summary of change:	* Inappropriate use of 403.
Consequences if not approved:	
Clauses affected:	* Table D.2
