**Title:** [WMS1.4 SWG] DescribeLayerResponse should report feature type names by layer

**Source:** interactive instruments GmbH

**Work item code:**

**Category:** C (Functional modification of feature)

**Reason for change:**

05-078r4 in section 8.3 reads: "For each named layer, the description should indicate the WFS/WCS (by a URL prefix) and the feature/coverage types." 

Though the DescribeLayer request permits to specify a list of layers and though the DescribeLayerResponse provides for a "LayerDescription" element, which can occur more than once in the response, there is no element available in the "LayerDescription" which could carry the layer name.

**Summary of change:**

Add a mandatory element "LayerName" to "LayerDescriptionType".

**Consequences if not approved:**

It will not be possible to represent the response data as requested in 05-078r4 section 8.3.

**Clauses affected:**

8.3, 8.3.1

**Additional Documents affected:**
