

Synthetic Environment Core (SE Core)

3D Geospatial M&S Summit Follow On

SE Core
PM ITE – PdM WTI

Classification: UNCLASSIFIED

Distribution Statement A: Approved for Public Release –
Distribution is unlimited.

Enabling a Common Training Environment

(Integrated Training Environment (ITE) and Constructive)

Gaming

Virtual

- Integrated and interoperable training environment for Live, Virtual, Constructive, Gaming simulations and simulators.
- Terrain correlated across multiple systems
- Common representation of static and moving models.
- Virtual, Constructive and Gaming entity mapping.
- Common damage, standard behaviors provided by Virtual One Semi Automated Forces (OneSAF).
- 1:250K, 1:50K, 1:25K and 1:12.5K map scales.

Constructive

Mission

The Synthetic Environment Core (SE Core) program generates a common *environment*, standard *static and common moving models*, *common computer generated forces*, and *common tools and standards* that support Army training for system and non-system training aids, devices, simulators and simulation systems (TADSS) in the live, virtual, constructive, and gaming simulation systems.

DRLMS	X																1
DTED	X		X			X	X	X			X	X					2 DTED 1/2
DTED/DMED (Source)	X																1
Environment Manager	X	X															2 Two variants
EPX-50 CM2	X	X															2 Two variants
EPX-50 Terrain	X	X															2 Two variants
EURONAV	X																1
F1B Elevation					X												1
File GeoDatabase	X	X					X	X			X						3 Three variants
Filmbox CM2		X															1
GeoTIFF Elevation										X							1
GeoTIFF Imagery												X		X			2 Two variants
GeoTIFF Map										X							1
JPEG2000 Maps				X													1
VRSG (MDS) Terrain												X					1
NVIG Terrain												X					1
OpenFlight CM2	X	X															1
OpenFlight Terrain	X	X											X				3 Three variants
OTF Terrain AVCATT	X																1
OTF Terrain CCTT		X				X											1
OTF Terrain WARSIM							X	X									2 Two variants
VBS P3D CM2		X													X	X	2 Two variants
VBS P3D Static Model		X													X	X	3 Three variants
VBS PBO Terrain		X													X	X	3
PVD		X															1
Shape w/FACC				X	X		X		X								4 Four variants
Text file (BMC)	X																1
TIREM	X	X															2 Two variants

There is a cost to build and test each format. *Available on AME

SE Core Terrain Process

SE Core Geospatial Data Production End to End Process

The SE Core CVEM database generation process continually evolves utilizing USG equipment. Through technology insertic commercial-off-the-shelf (COTS) advancements, and in-house software development, this process will continue to change a the program moves forward.

3.1 Database Request & Requirements Analysis

3.2 Source Data Collection, Standardization, and Conflation

3.3 Vector data processing

3.4 3D Model Generation

3.5 Airfield Vector Creation

3.6 Master Database Population

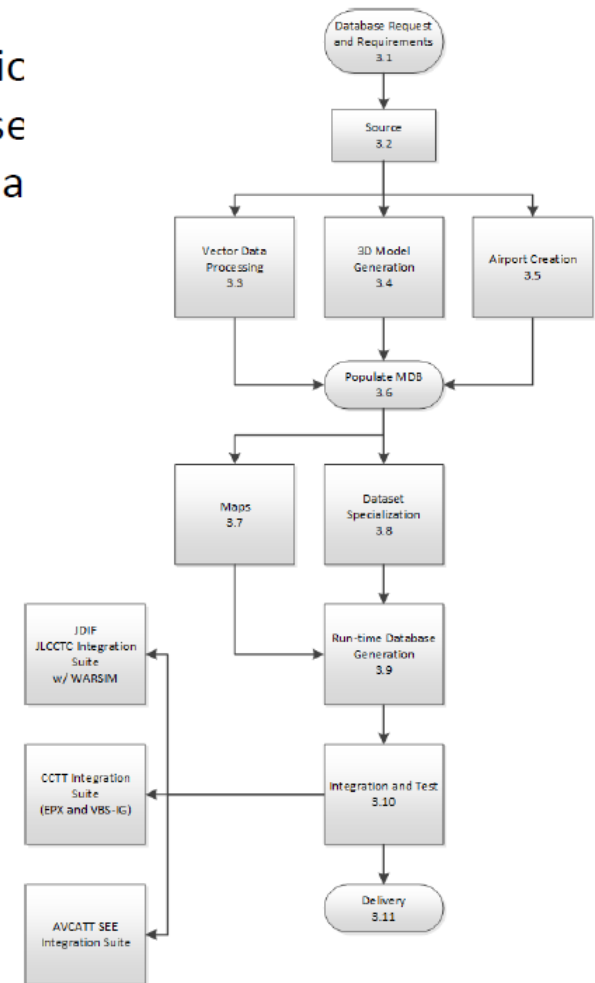

3.7 Map Generation

3.8 Data Specialization

3.9 Runtime Database Generation

3.10 Runtime Database Integration Test

3.11 Product Delivery

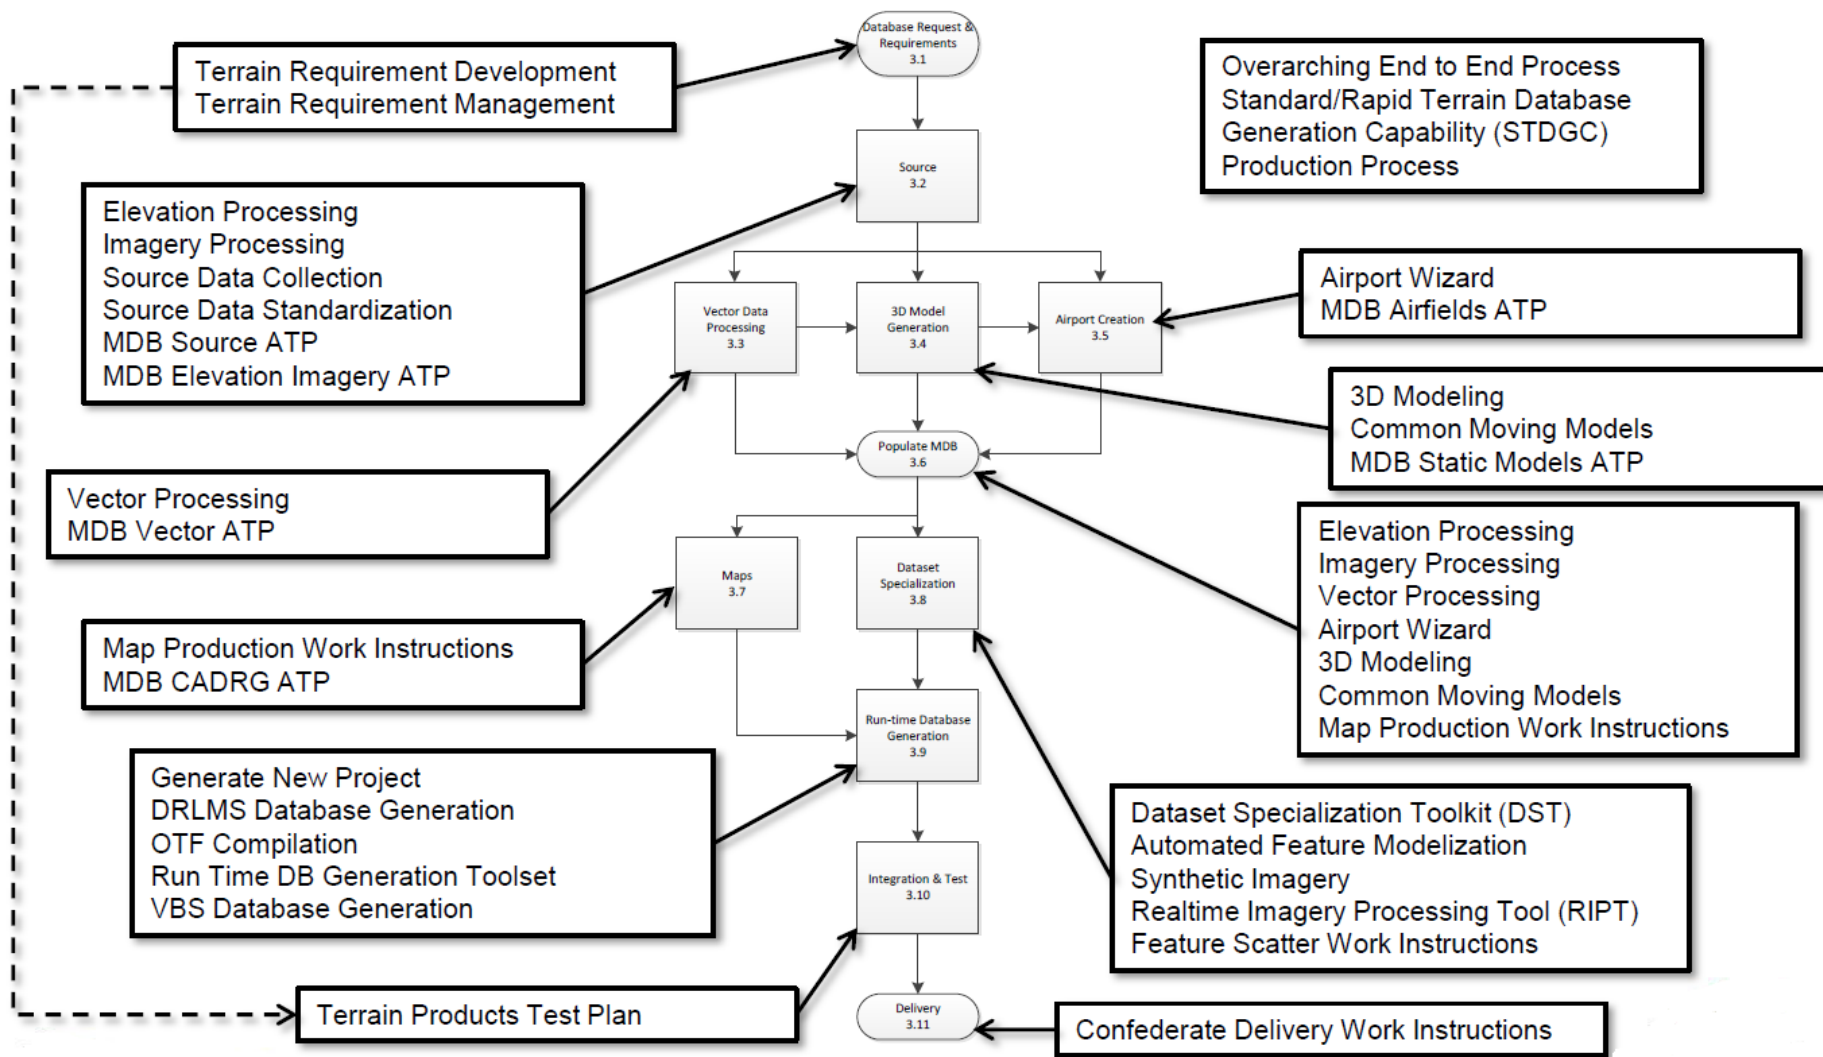

SE Core Data Sources

- SE Core utilizes over 100 data sources, to include Government agencies like National Geospatial Agency (NGA), U.S. Dept. of Agriculture, U.S. Geological Survey (USGS), US Census Bureau, and U.S. DoD. Also vendors like Digital Globe, and open source information like OpenStreetMap
 - Chooses the best sources for each location. Conflate intersecting sources (combines best attributes of multiple sources)
 - Continually searches for new sources as better data become available (e.g. recent receipt of rich raw data from NGA/Leidos)
 - Collaborates with outside agencies (SOFPREP, NAVAIR Portal Source Initiative (NPSI))
 - Shares our data: SOFPREP, Air Force, Marine Corps, Navy, Stryker PM
- Criteria for data sources
 - Cost effective
 - Unclassified (SE Core is an unclassified program)
 - Data rights (ability to distribute data products to any Army customer)
- SE Core performs a Source Data Review before building terrain – assures adequate data
- Opportunities for additional data outside criteria
 - State, county and city municipalities
 - Department of Homeland Security

SE Core Geospatial Data Production End to End Process Work Instructions

Standards Activities (1/5)

SE Core Program Standards

- ITE Terrain Databases and Common Moving Models Standards
 - Common Moving Model Specification
 - Generation One – AVCATT EPX
 - Generation Two – Gaming, CCTT VBSIG
 - Data standards for SE Core Master Database (MDB) repository
 - Environmental Data Model (EDM)
 - Quality Content Specification (QCS)
 - Using industry “standard” formats including
 - Shapefile for features,
 - GeoTIFF for imagery and elevation, and
 - OpenFlight and FilmBox for 3D models.
- SISO Terrain Data Interchange and Interoperability Standards
 - Maintain the Army’s Virtual Distributed Interactive Simulation (VDIS) standards
 - Lead the DIS Enumerations Working Group
 - Maintains the Army’s Master Entity List (MEL), defining the mapping of the DIS Enumerations to terrain database objects and models within ITE training systems
 - Supports the SISO Reuse and Interoperation of Environmental Data and Process (RIEDP)

Standards Activities (2/5)

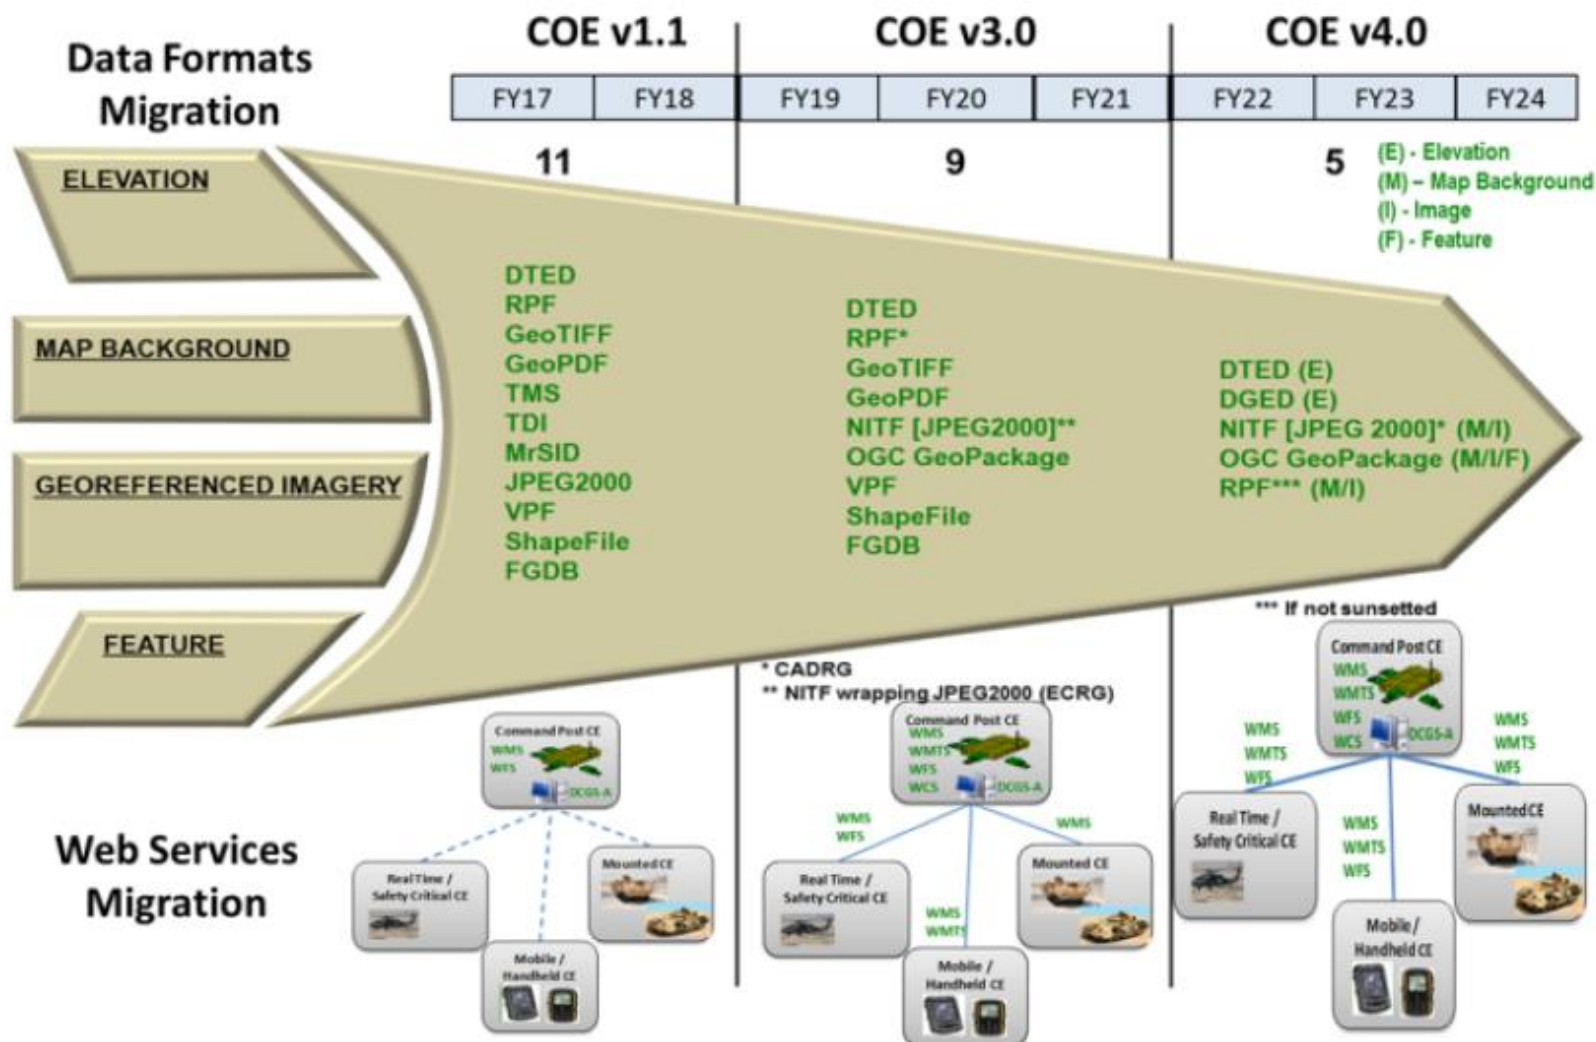

SE Core Sharing Standards

- Alignment of Army M&S and MC Geospatial data standards
 - Best long-term strategy for Army M&S geospatial data standardization is to align with the Army Operational Mission Command geospatial standardization activities
 - Supporting the Army's Command Post Computing Environment (CPCE) initiative to define a Common Operating Environment (COE) and a Standard and Sharable Geospatial Foundation (SSGF) for all MC systems
 - Working with the Army Geospatial Center (AGC) and the OGC in the development of a GeoPackage Encoding Standard and
 - Proposing a companion to NSG GeoPackage Profile: PEO-STRI Profile for M&S data.
 - Sharing of SE Core produced CADRГ maps, real and synthetic aerial imagery, elevation data, vector feature data, geospatial terrain data, 3D models, and texture data
 - Consistent with the Army's Ground-Warfighter Geospatial Data Model (GGDM) with the National System for Geospatial-Intelligence (NSG) Feature Data Dictionary (NFDD) feature codes and attribution

Standards Activities (3/5)

Standard and Sharable Geospatial Foundation (SSGF)

Standards Activities (4/5)

SE Core Format Consolidation

	Current File Formats	Initial Migration	Long-term Migration
Imagery	GeoTIFF Erdas Imagine (.img) LizardTech MrSID	GeoTIFF LizardTech MrSID	GeoPackage
Elevation	GeoTIFF MrSID IMG DTED	GeoTIFF DTED	GeoPackage DTED
Vector Features	SDE Shapefile	SDE GeoPackage	SDE GeoPackage
Models	OpenFlight Filmbox	OpenFlight Filmbox	Filmbox GeoPackage
Maps	CADRG	CADRG GeoTIFF	GeoPackage

Standards Activities (5/5)

SE Core GeoPackage Proof of Concept Work

- Investigating expanding GeoPackage standard for use in Modeling and Simulation (M&S)
- Demonstration a single database with visual and abstract objects can provide all of the data necessary to create database products for use in M&S

SE Core GeoPackage with polygonal geometry proof of principle prototype

SE Core POCs:

Lewis Bowman, Lead Engineer:

Lewis.y.bowman.civ@mail.mil
